Notes for 2011 blood lead data

Data from RASSCLE surveillance database archive of 11/08/2013

* Measures are in µg/dL (micrograms per deciliter) of whole blood

Blood lead levels reported from the analyzing laboratory as "< 5 µg/dL" are included in the category "BLL < 4.5"

Each individual is counted only once, using their highest blood lead level during 2011.

If an individual moved between two jurisdictions, then the child's residence at the time of their highest blood lead level is the one counted.

Results later determined to be false positives have been excluded.

We were unable to determine the age of 611 individuals tested in 2011. Of those with indeterminate age, none had levels ≥ 9.5 , 580 had levels of ≥ 4.5 to < 9.5, and 31 had levels below 4.5. These results are not included in the table above.

Data should be considered as preliminary and subject to revision.
